	EUROPEAN STANDARDS	60
	EXPANSION JOINT GUIDE	61
	TABLE OF CONTENTS	62

GENERAL GUIDELINES

SUBSTRATE

Before starting any tiling project ensure that the substrate to be tiled is:

- Clean & dry.
- Free from any contaminants.
- Sufficiently flat.
- Free from all paints, sealers and other coatings.
- Strong and rigid enough to support the tiles, adhesive and grout.

The preparation, type of adhesive & grout and whether expansion joints or tile sealer will be required, depends on the type of tile, type of substrate and site conditions.

For guidelines on substrate preparation see pages 46-61.

MOVEMENT JOINTS

Movement joints must be installed in certain areas and positions to prevent tiles debonding from the substrate. Industry standards suggest that the maximum field should be no more than 10m in each direction but in practice, depending on the individual application, it tends to be between 5 to 8m.

See page 61 for guidelines on the use of movement/expansion joints.

TILE TYPES

Ceramic and other tile types vary according to material, production method, water absorption, size, thickness and weight. These affect the choice of adhesive and installation procedure.

Large format tiles should be back-buttered and fixed in a solid bed of adhesive.

For guidelines on adhesive choice see pages 22-27.

MIXING GUIDELINES

All Arc adhesives and grouts come with specific instructions on the bag. In general, powder adhesives and grouts should be mixed with clean, cold water until a smooth paste is achieved.

If using an electric drill mixer, blend at a slow speed. Do not exceed 300rpm.

Mixed adhesive and grout can be remixed after a short period to freshen up but extra water should never be added after the initial mix as this will reduce final strength.

SUBSTRATE PRIMING

Before tiling, most wall and floor substrates require priming. The reasons for priming are:

- To improve the adhesion of cement based products.
- Reduce the porosity of porous substrates.
- To improve adhesion to difficult substrates.
- Produce a barrier between calcium sulphate based surfaces and cement based adhesive to minimise the risk of chemical reaction.

For a detailed substrate priming guide see page 60.

APPLICATION

All packs carry specific instructions, but in general the following apply:

- Do not apply adhesives & grouts in temperatures below 5°C.
- Setting time might be slower in cool conditions and faster in warm conditions.
- Apply a maximum of 1m² of adhesive at a time.

- Ensure tiles are fixed into a solid bed of adhesive.

Do not dot and dab adhesive.

- Ensure ribs all run in the same direction.
- Fix tiles before the adhesive forms a skin, typically 20 minutes.
- When grouting, completely fill the tile joints, compact well and ensure there are no voids.

SEALING TILES

Tiles and grout are by their nature porous. To prevent the ingress of water and subsequent damage to the substrate and adhesive bond, tile facings and grout should be sealed with an appropriate sealer.

Likewise, to protect against staining from spills and dirt, facings and grout should be appropriately sealed.

See pages 43-44 for the correct choice of sealer.

EUROPEAN STANDARDS

All Arc products are manufactured in accordance with EUROPEAN STANDARDS and meet or exceed the classifications which define the type and properties of each product.

See page 60 for an explanation and description of each category and classification.

NOTE: All information given is for general guidance only. Arc cannot accept liability for loss or damage caused by the incorrect use of its products or poor workmanship.

The user must ensure the product's suitability for the application intended and if in doubt should seek a written technical specification for the product's application.

FLOOR LEVELLING

ARC SELF-LEVEL

- ✓ A high quality floor levelling compound. Gives a free flowing mix.
- ✓ Up to 6mm with addition of water or 8mm with addition of Arc Latex Admixture.
- ✓ Provides a smooth level finish on rough & uneven surfaces.

Size	Colour	Packed	Prod Code	Barcode
20kg	Grey	1 unit	PFLC001	5 391514 610515

	Coverage	8m ² @1½mm
	Pot Life	20 min
	Set Time	3 hours
	Depth	up to 8mm
	13813:2002	CT-C16-F4

FOR APPLICATION TO:

- Concrete
- Screeds
- Backer Boards

ARC HIGHBUILD LEVELLING COMPOUND

- ✓ Suitable for underfloor heating and properly prepared timber floors.
- ✓ High durability, non shrink, for use internally and externally.
- ✓ Fast setting, fibre reinforced, flexible and pumpable levelling compound.
- ✓ From a featheredge to 50mm depth.
- ✓ Foot traffic after 1 hour, tile after 3 hours.
- ✓ Suitable for use as a final wearing course.

Size	Colour	Packed	Prod Code	Barcode
20kg	Grey	1 unit	PFLC003	5 391514 612113

	Coverage	4.2m ² @3mm
	Pot Life	20-30 min
	Set Time	2-3 hours
	Depth	up to 50mm
	13813:2002	CT-C30-F7

FOR APPLICATION TO:

- Plywood
- Existing Tiles
- Screeds
- Vinyl Tiles
- Concrete
- Backer Boards
- T&G Floors
- Fibre Cement
- Underfloor Heating
- Anhydrite Screed
- Heated Screed
- Asphalt Flooring

ARC RAPID-LEVEL

- ✓ Application depth up to 15mm.
- ✓ Foot traffic after 30 minutes.
- ✓ Tile after 45 minutes.
- ✓ Suitable for underfloor heating

Size	Colour	Packed	Prod Code	Barcode
20kg	Buff	1 unit	PFLC004	5 391514 615558

	Coverage	4.2m ² @3mm
	Pot Life	15 min
	Set Time	30 min
	Depth	up to 15mm
	13813:2002	CT-C35-F10

FOR APPLICATION TO:

- Plywood
- Existing Tiles
- Screeds
- Vinyl Tiles
- Concrete
- Backer Boards
- T&G Floors
- Fibre Cement
- Underfloor Heating
- Anhydrite Screed
- Heated Screed
- Asphalt Flooring

ARC LATEX ADMIXTURE

- ✓ A high quality latex admixture for use with floor levelling compounds, tile adhesives and grouts.
- ✓ When mixed with Arc Self-Level, it can be used to prepare most rigid surfaces prior to the installation of floor coverings such as vinyl, carpet and ceramic floor tiles.

Size	Colour	Packed	Prod Code	Barcode
5lt	White	4 units	LFLC001	5 391514 611109

	Mix Ratio	4/4½lt to 20kg
	Pot Life	20-30 min
	Set Time	3 hours
	Depth	up to 8mm

FOR APPLICATION TO:

- Plywood
- Underfloor Heating
- Render
- Anhydrite Screed
- Heated Screed
- Asphalt Flooring
- Concrete
- Plasterboard
- Brick & Block
- Screeds
- Vinyl Tiles
- Plaster
- Existing Tiles
- Backer Boards
- T&G Floors
- Fibre Cement

ARC ACRYLIC DPM

- ✓ Water based, low VOC compliant.
- ✓ Arc Acrylic DPM is a ready to use, one part, water-based moisture vapour suppressant developed to suppress residual construction moisture in cementitious subfloors including concrete and sand/cement screeds.
- ✓ Suitable for new build only.

Size	Colour	Packed	Prod Code	Barcode
5lt	Black	4 units	DPM001	5 391514 613547

	Coverage	16m² for 2 coats
	Drying Time	1 hour
	Humidity	up to 95% RH

FOR APPLICATION TO:

- Concrete
- Floor Levelling Compound
- Screeds

SPIKE ROLLER

- ✓ For use with floor screeds & epoxy resin coatings to remove trapped air bubbles.

Size	Packed	Prod Code	Barcode
500 x 11mm	1 unit	TTSN015	5 021378 047362

	Size (WxD)	500mm x 11mm
	Handle	Steel

TILING PREPARATION

ARC TILERS PRIMER

- ✓ A high quality styrene butadiene co-polymer emulsion for use as a primer, bonding agent and sealer.
- ✓ Interior & Exterior use.

Size	Colour	Packed	Prod Code	Barcode
5lt	Green	4 units	STP005	5 391514 611062
1lt	Green	12 units	STP006	5 391514 611512

☑ Coverage	10m ² /1lt neat
☑ Mix Ratio	see page 60
☑ Drying(absorbent)	30-60 min
☑ Drying(non-absorbent)	60-90 min

FOR APPLICATION TO:

- Plywood
- Underfloor Heating
- Render
- Anhydrite Screed
- Heated Screed
- Asphalt Flooring
- Concrete
- Plasterboard
- Brick & Block
- Screeds
- Vinyl Tiles
- Plaster
- Existing Tiles
- Backer Boards
- T&G Floors
- Fibre Cement

ARC TILERS PRIMER PLUS

- ✓ Provides a textured grit finish to difficult substrates such as existing tiles, prior to tiling.
- ✓ Ready mixed & ready to use.
- ✓ Solvent-free formulation.
- ✓ Interior & Exterior use.

Size	Colour	Packed	Prod Code	Barcode
5kg	Blue	1 unit	STPP001	5 391514 614544

☑ Coverage	50m ² /pack
☑ Drying(absorbent)	60 min
☑ Drying(non-absorbent)	120 min

FOR APPLICATION TO:

- Plywood
- Underfloor Heating
- Render
- Anhydrite Screed
- Heated Screed
- Asphalt Flooring
- Concrete
- Plasterboard
- Brick & Block
- Screeds
- Vinyl Tiles
- Plaster
- Existing Tiles
- Backer Boards
- T&G Floors
- Fibre Cement

ARC TANKING PASTE

- ✓ Creates a tough, flexible, waterproof membrane for use under tiles in wet rooms, showers, bathrooms & balconies.
- ✓ Also for use in basements, roofs and silage pits.

Size	Colour	Packed	Prod Code	Barcode
5kg	Blue	1 unit	TAKP001	5 391514 612670

☑ Coverage	7.5m ² /pack
☑ Set Time -1st coat	60 min
☑ Set Time -2nd coat	120 min
☑ Tile After	8 hours

FOR APPLICATION TO:

- Plywood
- Plasterboard
- Brick & Block
- Screeds
- Concrete
- Existing Tiles
- Backer Boards
- Vinyl Tiles
- Plaster
- Render
- Anhydrite Screed
- Fibre Cement

ARC TANKING KIT

- ✓ Provides under-tile protection against water and dampness on interior walls and floors in wet rooms, bathrooms, kitchens, showers etc.
- ✓ Suitable for a standard shower.

Size	Packed	Prod Code	Barcode
5m²	1 unit	TAKT001	5 391514 611147

- Coverage 5m²
- Tile After 8 hours
- Contents
 - 2½lt Tanking Paste
 - 1lt Primer
 - 10m Jointing Tape
 - 1m² Polyester Matting

FOR APPLICATION TO:

- Plywood
- Plasterboard
- Brick & Block
- Screeds
- Concrete
- Existing Tiles
- Backer Boards
- Vinyl Tiles
- Plaster
- Render
- Anhydrite Screed
- Fibre Cement

ARC TANKING KIT PREMIUM

- ✓ Provides under-tile protection against water and dampness on interior walls and floors in wet rooms, bathrooms, kitchens, showers etc.
- ✓ Suitable for a standard shower.

Size	Packed	Prod Code	Barcode
5m²	1 unit	TAKT003	5 391514 614810

- Coverage 5m²
- Tile After 8 hours
- Contents
 - 2½lt Tanking Paste
 - 1lt Primer
 - 4" Brush
 - Latex Gloves
 - 5m Self Adhesive Butyl Tape

FOR APPLICATION TO:

- Plywood
- Plasterboard
- Brick & Block
- Screeds
- Concrete
- Existing Tiles
- Backer Boards
- Vinyl Tiles
- Plaster
- Render
- Anhydrite Screed
- Fibre Cement

PLASTIC PLY REINFORCING SHEET

- ✓ Reinforcing sheet for timber floors.
- ✓ Self adhesive, ultra thin at 2mm, simple to install, moisture resistant.
- ✓ Can be applied to tongue & groove.
- ✓ Replaces the need to sheet off with 15mm ply.

Size	Colour	Packed	Prod Code	Barcode
1.2m²	Blue	12 units	GXRS001	5 021378 086200

- Coverage 1.2m²/pack
- Thickness 2mm
- Application Self Adhesive

FOR APPLICATION TO:

- Timber Floors
- T&G Floors
- Plywood
- Chipboard

INTERLINX 3GG DECOUPLING MEMBRANE

- ✓ Absorbs substrate stresses protecting the tile installation.
- ✓ 100% Waterproof.
- ✓ The hydrophilic fleece removes moisture allowing faster cure.
- ✓ Heat bonded layers ensure secure & durable anchoring.
- ✓ Easy installation. LDPE layer reduces curling.

Size	Colour	Packed	Prod Code	Barcode
1 x 30m	Grey	1 unit	PROL008	5 391514 615343

	Size	1m x 30m
	Thickness	Approx 3mm
	Material	LDPE with PP fleece on both sides
	EN	13967

FOR APPLICATION TO:

- Showers
- Wetrooms
- Pool Areas
- Solid Substrates subject to cracking
- Bathrooms
- Balconies
- Patios
- Underfloor Heating

WATERPROOFING & DECOUPLING MEMBRANE

- ✓ As a waterproofing membrane suitable for wetrooms, terraces and balconies.
- ✓ Internal & external. For walls and floors.
- ✓ Highly tear-proof.
- ✓ Excellent rotting resistance.
- ✓ As a decoupling membrane suitable for firm (cracked) substrates.

Size	Colour	Packed	Prod Code	Barcode
1 x 30m	Grey	1 unit	PROL001	5 391514 612892

	Size	1m x 30m
	Thickness	Approx 0.4mm
	Material	Polyethylene with PP fleece on both sides

FOR APPLICATION TO:

- Showers
- Wetrooms
- Pool Areas
- Solid Substrates subject to cracking
- Bathrooms
- Balconies
- Patios
- Underfloor Heating

ARC HYDROSET BOARDS

- ✓ An extruded polystyrene foam core sandwiched between mortar/fibre-glass outer layers.
- ✓ 100% Waterproof, sturdy, thermally insulating, light weight, compression proof and easy to work with.

Size	Packed	Prod Code	Barcode
1250x600x6mm	8 units	MTBB002	5 391514 613103

- Bathrooms
- Showers
- Pool Areas

ARC MAGNA BOARDS

- ✓ Magnesium board.
- ✓ Impact resistant, moisture & water resistant.
- ✓ A1 fire rated for wall & floor tiling.
- ✓ Chloride free.
- ✓ Accepts a variety of finishes.
- ✓ Replaces timber and plasterboard.

Size	1200 x 600mm

TILE MAINTENANCE

ARC GROUT & TILE SEALER

- ✓ For Tiles & Grout.
- ✓ Penetrating protection.
- ✓ Does not alter the natural look.
- ✓ Interior & exterior.
- ✓ 20 year protection.
- ✓ Suitable for all tiles including natural stone, porcelain (incl. polished), travertine, limestone, marble, granite, sandstone etc. Can be applied to damp grout & tiles.

Finish	Clear
Coverage	25m ²
Drying Time	1 hour
Type	Sealer/Protector

TILING GUIDE - WALLS

GYPSUM PLASTER

- ✓ Allow 4 weeks minimum for new plaster to dry.
- ✓ Ensure surface is free of any contaminants, loose dust or dirt.
- ✓ Polished/shiny plaster must be brushed with a stiff brush.
- ✓ Maximum weight when tiling to plaster is 20kg per m² including tiles, adhesive and grout.
- ✓ Any paint must be removed prior to tiling.

Tiling Guidelines

1. Prime the plaster with Arc Tilers Primer diluted 3 parts water to 1 part primer followed by a second neat coat & allow to dry.
2. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

GYPSUM PLASTERBOARD

- ✓ Ensure the boards are fixed securely to the framework, ideally screwed at 300mm centres.
- ✓ Ensure surface is free of any contaminants, loose dust or dirt.
- ✓ If the plasterboard is fixed to a timber frame, a flexible adhesive and grout must be used.
- ✓ Maximum weight when tiling to plasterboard is 32kg per m² including tiles, adhesive and grout.
- ✓ Any paint must be removed prior to tiling.

Tiling Guidelines

1. Prime the plasterboard with Arc Tilers Primer diluted 3 parts water to 1 part primer.
2. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

SAND & CEMENT RENDER

- ✓ Allow 2 weeks minimum for new render to dry.
- ✓ Ensure surface is free of any contaminants, loose dust or dirt.
- ✓ If tiling externally, protect the tiled area from water ingress for 24-48 hours.

Tiling Guidelines

1. Prime the render with Arc Tilers Primer diluted 3 parts water to 1 part primer & allow to dry.
2. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

CONCRETE BLOCKS

- ✓ New block work must be left for a minimum of 6 weeks before rendering or plastering.
- ✓ Ensure surface is free of any contaminants, loose dust or dirt.
- ✓ If tiling directly to block work, ensure the wall is smooth faced.
- ✓ If tiling externally, a flexible adhesive and grout must be used and protect the tiled area from water ingress for 24-48 hours.

Tiling Guidelines

1. Prime the surface with Arc Tilers Primer diluted 3 parts water to 1 part primer & allow to dry.
2. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

EXISTING GLAZED TILES / BRICKS

- ✓ Ensure existing tiles are firm, stable and securely fixed.
- ✓ Ensure surface is free of any contaminants, loose dust or dirt.

Tiling Guidelines

1. Prime the surface with Arc Tilers Primer Plus neat coat & allow to dry.
2. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

PLYWOOD

- ✓ **BS 5385 Part 1: Tiling direct to plywood is no longer recommended for wall tiling, but a bespoke tiling backer board should be used.**
- ✓ Arc recommends using Magna Boards as a backer board.

Tiling Guidelines

1. Fix Arc Magna-Boards to the plywood using stainless steel or galvanised screws every 300mm. Fixings should be at least 15mm from the edge and 20mm from the corners. Boards should be offset so that 4 corners never meet at the same point.
2. Prime the Arc MagnaBoards with Arc Tilers Primer diluted three parts water to one part primer.
3. Joints should be taped with Arc Scrim Tape.
4. Apply a bed of Arc Pro-Flex or High-Flex 55 Standard Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

TILING GUIDE - FLOORS

SAND & CEMENT SCREED

- ✓ New sand & cement screed must be left for a minimum of 4 weeks to dry sufficiently.
- ✓ Remove any loose flaking layers and ensure surface is free of any contaminants, loose dust or dirt.

Tiling Guidelines

1. Prime the screed with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry. Very porous screeds may require more than one coat of primer.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

CONCRETE BASE

- ✓ New concrete must be allowed a minimum of 6 weeks drying time. Allow 1 day per mm for an overall depth of 50mm and 2 days per mm for any depth above 50mm.
- ✓ Remove any laitance from surface & ensure surface is free of any contaminants, loose dust or dirt.

Tiling Guidelines

1. Prime the base with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry. Very porous concrete may require more than one coat.
Power floated concrete should be abraded and cleaned before priming with one coat of Arc Tilers Primer Plus.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

CEMFLOOR FLOWING SCREEDS

- ✓ Flowing screeds based on cement are relatively new to the market. While it is likely the producer will recommend that no surface preparation is required, it is always worth assessing the screed on site for suitability to receive tiling directly.
- ✓ All movement joints and crack inducer joints must be carried through the tiling.

Tiling Guidelines

1. Priming is not generally required, we would recommend contacting the producer for their guidance with regards to preparation.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

GYPSUM SCREED

- ✓ Gypsum screed must be confirmed dry via consistent moisture readings. The residual moisture content must be less than 0.5%.
- ✓ We recommend that ALL calcium sulphate based screeds are mechanically prepared before proceeding, e.g. by STR type machine and then brushing/vacuuming to remove dust.

Tiling Guidelines

1. Prime the screed with 2 coats of Arc Tilers Primer, first diluted 3 parts water to 1 part primer followed by a neat coat. Allow to dry in between coats.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

FLOORING GRADE ASPHALT

- ✓ Remove any surface contamination, loose dust or dirt and ensure there are no signs of debonding or hollowness.

Tiling Guidelines

1. Prime the surface with Arc Tilers Primer Plus neat coat & allow to dry.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

**Note: Only flooring grade asphalt is suitable to receive tiling and only internally.*

EXISTING TILES

- ✓ Ensure existing tiles are firmly bonded to the original substrate.
- ✓ Remove any loose tiles and make good.
- ✓ Remove any surface contamination, loose dust or dirt.

Tiling Guidelines

1. Prime the existing tiles with Arc Tilers Primer Plus neat coat & allow to dry.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

EXISTING VINYL TILES / VINYL SHEETS

- ✓ Ensure existing vinyl is firmly bonded to the original substrate.
- ✓ Remove any loose vinyl tiles and make good.
- ✓ Remove any surface contamination, loose dust or dirt.
- ✓ If present, floor polish should be removed.

Tiling Guidelines

1. Prime the existing vinyl with Arc Tilers Primer Plus neat coat & allow to dry.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

**Note: Cushioned vinyl is generally not suitable for over tiling.*

TONGUE & GROOVE FLOORBOARDS - PLYWOOD OVERLAY

- ✓ Arc recommends using MagnaBoards as a better alternative for plywood. See page 55 for details.
- ✓ Floors must be structurally sound and strong enough to support the traffic loading expected for the area concerned.
- ✓ Plywood must be exterior grade and a minimum of 15mm.
- ✓ Stagger the joints when fixing the plywood, leaving a 0.5mm to 1mm gap between boards.
- ✓ Plywood must be screwed, not nailed, at 150mm centres.
- ✓ Remove any surface contamination, loose dust or dirt.

Tiling Guidelines

1. Prime the plywood with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

TIMBER FLOORS

- ✓ Arc recommends using MagnaBoards as a better alternative for plywood. See page 55 for details.
- ✓ Floors must be structurally sound and strong enough to support the traffic loading expected for the area concerned.
- ✓ Plywood must be exterior grade and a minimum of 15mm.
- ✓ Stagger the joints when fixing the plywood, leaving a 0.5mm to 1mm gap between boards.
- ✓ Plywood must be screwed, not nailed, at 150mm centres.
- ✓ Remove any surface contamination, loose dust or dirt.

Tiling Guidelines

1. Prime the plywood with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

DECOUPLING MEMBRANE

- ✓ Ensure the original substrate is firm, stable, in good condition and any cracks have been repaired.
- ✓ Remove any loose flaking layers and ensure the surface is free from any contaminants, loose dust or dirt.

Tiling Guidelines

1. Prime the substrate with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry.
2. Apply a thin 3mm to 6mm bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and lay the decoupling membrane with the dimples facing downwards while the adhesive is still moist. Allow the adhesive to cure before tiling commences.
3. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive over the membrane and bed in the tiles or slabs in accordance with the usual practice.
4. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

ELECTRIC UNDERFLOOR HEATING

- ✓ Ensure substrate is firm, stable and in good condition.
- ✓ Remove any surface contamination, loose dust or dirt.

Tiling Guidelines

1. Prime the concrete floor with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry.
2. Ensure the underfloor heating mat is taped down to the substrate and embed the mat using Arc Highbuild Floor Levelling Compound which should be at least 3mm above the mat.
3. Once cured, prime the compound with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry.
4. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
5. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

**Note: The distance between movement joints in the floor coverings should not exceed an edge length of 8m. The area should not be larger than 40m². Once complete, allow 7 days before switching the heating on, initially at a low temperature and then increase the temperature gradually by 5°C per day.*

HEATED SCREEDS

- ✓ New sand / cement screeds must be left for a minimum of 4 weeks to dry sufficiently.
- ✓ Turn off the heating 24 hours prior to tiling, or in cold weather reduce to below 15°C.
- ✓ Remove any loose flaking layers and ensure the surface is free from any contaminants, loose dust or dirt.

Tiling Guidelines

1. Prime the screed with Arc Tilers Primer diluted 3 parts water to 1 part primer and allow to dry. Very porous screeds may require more than one coat.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

**Note: The distance between movement joints in the floor coverings should not exceed an edge length of 8m. The area should not be larger than 40m². Once complete, allow 7 days before switching the heating on, initially at a low temperature and then increase the temperature gradually by 5°C per day.*

EXTERNAL TILING

GENERAL GUIDELINES

When tiling externally with Porcelain Paving and suitable natural stone, there are a number of possible installation methods recommended by manufacturers:

Flexible: Loose laid on a compacted sand or gravel bed, as is normal with concrete paving etc. Jointing is typically loose sand or gravel, stabilised or 'polymer sand' type.

'Landscaper': Laid on a mortar bed on a stable compacted base, in which case a priming slurry would ensure a bond between the paving unit and the bedding. Jointing is typically either rigid cement-based grout or flexible 'polymer sand'.

Pedestal: Raised on a suitable proprietary pedestal system installed on a concrete base, usually on roof or balcony installations.

Tiled: Laid with flexible tile adhesive on a fully cured, 'structural', frost resistant concrete slab. Jointing should be carried out with a suitable flexible tile grout.

With all methods when used externally it is important to consider water (rain) management, drainage and movement accommodation.

BASE PREPARATION - NEW CONCRETE

- ✓ New Concrete should be a minimum of 6 weeks old prior to tiling.
- ✓ When installing a new base, advice should be sought from an architect etc. The following is brief guidance regarding some of the considerations.
- ✓ Concrete should be a minimum of 150mm deep installed on a minimum of 100mm compacted hardcore base.
- ✓ For best results a DPM should be in place between the hardcore and concrete.
- ✓ Concrete should be laid to fall to drains and away from buildings. Typically, a fall of 1.5 – 2% is adequate (ca. 1:60 to 1:50).
- ✓ Ideally the concrete should be finished with an open, wood float type finish. It is recommended not to powerfloat the finish.
- ✓ If a spray applied curing membrane has been used this should be mechanically removed prior to tiling.

BASE PREPARATION - EXISTING CONCRETE

- ✓ Ensure adequate falls exist in the concrete.
- ✓ Any minor cracks or damaged areas should be repaired and made good. Significant cracking should be investigated to ensure that any movement has stopped and that the crack is no longer 'live'.
- ✓ Ensure the surface has been thoroughly cleaned and any contamination has been removed.
- ✓ 2-3 days prior to tiling treat the surface with Arc Algae & Green Slime remover.

Tiling guidelines

1. Concrete should be dry.
2. Prime the concrete with Arc Tilers Primer diluted 3 parts water to 1 part primer. Do not allow primer to pond. Allow primer to dry before tiling.
3. Install tiles with Arc Ultra-Flex S2 adhesive.
4. The tiles should be back buttered with a thin coat of adhesive immediately before fixing with a solid bed between 3-6mm. Full coverage between adhesive, tile and concrete is required.
5. Grout joints are recommended to be a minimum of 3mm and grouting carried out with Arc Pro-Line Grout or Arc Flexi Grout.

**Note: Movement accommodation should be installed around the tiling perimeter and anywhere the tiling meets another surface. Existing construction movement joints should also be carried through from the substrate. With large format tiles install intermediate movement joints at maximum 3 metre intervals.*

During the installation and until the grout is sufficiently cured, protect tiling installation from rain etc.

MAGNA BOARDS

INSTALLATION ON STUD WALL

- ✓ Vertical timber studs should be at a maximum of 600mm centres.
- ✓ 12mm boards are recommended for walls.

Tiling Guidelines

1. Fix Arc MagnaBoards (rough side out) to the frame using stainless steel or galvanised screws every 300mm. Fixings should be at least 15mm from the edge and 20mm from the corners. Boards should be offset so that 4 corners never meet at the same point.
2. Prime the Arc MagnaBoards with Arc Tilers Primer diluted three parts water to one part primer.
3. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for water resistance.
4. Apply a bed of Arc Pro-Flex or High-Flex 55 Standard Set Tile Adhesive and bed in the tiles or slabs in accordance with the usual practice.
3. Finish with Arc Pro-Line Grout.

**Note: Arc MagnaBoards are water resistant and will not deteriorate when exposed to water. However, for 100% waterproof substrate, we recommend using Hydroset Boards (details on pages 56-57). Alternatively tanking can be applied.*

INSTALLATION ON CONCRETE OR BLOCK WALL

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ 12mm boards are recommended for walls.

Tiling Guidelines

1. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.
2. Prime both sides and edges of the boards with Arc Tilers Primer diluted 3 parts water to one part primer.
3. Apply a bed of Arc Pro-Flex or High-Flex 55 Standard Set Tile Adhesive to the substrate and bed in the boards (rough side out) ensuring full surface contact. Using stainless steel or galvanised fixings, fix boards every 300mm. Fixings should be at least 15mm from the edge and 20mm from the corners. Boards should be offset so that four corners never meet at the same point.
4. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for water resistance.
5. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive to the Arc MagnaBoard and bed in the tiles or slabs in accordance with the usual practice.
6. Finish with Arc Pro-Line Grout.

**Note: Arc MagnaBoards are water resistant and will not deteriorate when exposed to water. However, for 100% waterproof substrate, we recommend using Hydroset Boards (details on pages 56-57). Alternatively tanking can be applied.*

INSTALLATION ON TIMBER FLOOR

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ 6mm or 12mm boards are recommended for floors.

Tiling Guidelines

1. Fix Arc MagnaBoards (rough side up) to the timber floor using stainless steel or galvanised screws every 300mm. Fixings should be at least 15mm from the edge and 20mm from the corners. Boards should be offset so that four corners never meet at the same point.
2. Prime the Arc MagnaBoards with Arc Tilers Primer diluted three parts water to one part primer.
3. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for water resistance.
4. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the MagnaBoard and bed in the tiles or slabs in accordance with the usual practice.
5. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

**Note: For greater adhesion and durability, as well as screw fixing, boards can be set in a bed of Arc Rapid Flex Tile Adhesive or beads of MS-11.*

****Arc MagnaBoards are water resistant and will not deteriorate when exposed to water. However, for 100% waterproof substrate, we recommend using Hydroset Boards (details on pages 56-57). Alternatively tanking can be applied.*

INSTALLATION ON CONCRETE FLOOR

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ 6mm or 12mm boards are recommended for floors.

Tiling Guidelines

1. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.
2. Prime both sides and edges of the boards with Arc Tilers Primer diluted 3 parts water to one part primer.
3. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the substrate and bed in the boards (rough side up) ensuring full surface contact. Using stainless steel or galvanised fixings, fix boards every 300mm. Fixings should be at least 15mm from the edge and 20mm from the corners. Boards should be offset so that four corners never meet at the same point.
4. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for water resistance.
5. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the MagnaBoard and bed in the tiles or slabs in accordance with the usual practice.
6. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

**Note: Arc MagnaBoards are water resistant and will not deteriorate when exposed to water. However, for 100% waterproof substrate, we recommend using Hydroset Boards (details on pages 56-57). Alternatively tanking can be applied.*

HYDROSET BOARDS

GENERAL GUIDELINES

Substrates

All substrates should be sound, clean, dry, level and free from any contamination. Substrates must be dimensionally stable and strong enough to support the expected traffic loading.

Cutting

Arc HydroSet Boards can be easily cut to shape and size using a standard utility knife or saw. Smooth and tidy up edges using a light abrasive.

Fitting

Arc HydroSet Boards can be fixed using a flexible adhesive (Arc Pro-Flex or T-20 if fitted on solid walls or Arc Rapid-Flex Tile Adhesive if fitted on floors) or by using screws and washers.

When fixing with screws and washers apply the fixings at 300mm centres leaving 1 inch from the edges. Boards should always be offset so that 4 corners never meet at one point.

Joints

All joints should be reinforced with Arc Scrim Tape. For 100% waterproofing, joints should be sealed with Arc Butyl Tanking Tape.

Note

When choosing the thickness of the boards most suitable for your installation you should consider a number of factors. Firstly, the build height that you have available may limit you to, for example, a maximum board thickness of 6mm. Additionally, if you are using the boards to secure a wooden base you should always use 10mm thick board. If you have the available build height we recommend using 20mm HydroSet boards as they provide a great trade-off between cost and insulation efficiency providing a U Value (W/m²k) of 1.35. Our 10mm boards have a U Value of 2.70 and our 6mm boards a U Value of 4.50.

INSTALLATION ON STUD WALL

- ✓ Vertical timber studs should be at a maximum of 600mm centres.
- ✓ For a stronger fixing MS-11 Rapid High Tack can be applied on the frame prior to fitting the boards on the stud wall.
- ✓ 12.5mm to 50mm boards are recommended for walls.

Tiling Guidelines

1. Fix Arc HydroSet Boards to the frame using screws and washers every 300mm. Fixings should be at least 1 inch from the edges. Boards should be offset so that 4 corners never meet at the same point.
2. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for 100% waterproofing.
3. Apply a bed of Arc Pro-Flex or High-Flex 55 Standard Set Tile Adhesive to the Arc HydroSet Board and bed in the tiles or slabs in accordance with the usual practice.
4. Finish with Arc Pro-Line Grout.

INSTALLATION ON SOLID WALL (ADHESIVE)

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ 12.5mm to 50mm boards are recommended for walls.

Tiling Guidelines

1. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.
2. Apply a bed of Arc Pro-Flex or High-Flex 55 Standard Set Tile Adhesive to the substrate and bed in the boards ensuring full surface contact. Boards should be offset so that 4 corners never meet at the same point.
3. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for 100% waterproofing.
4. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive to the Arc HydroSet Board and bed in the tiles or slabs in accordance with the usual practice.
5. Finish with Arc Pro-Line Grout.

INSTALLATION ON SOLID WALL (SCREWS & WASHERS)

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ For a stronger fixing MS-11 Rapid High Tack can be applied on the substrate prior to fitting the boards on the wall.
- ✓ 12.5mm to 50mm boards are recommended for walls.

Tiling Guidelines

1. Using screws and washers, fix boards every 300mm. Fixings should be at least 1 inch from the edges. Boards should be offset so that 4 corners never meet at the same point.
2. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for 100% waterproofing.
3. Apply a bed of Arc Pro-Flex, High-Flex 55 Standard Set or T-20 Tile Adhesive to the Arc HydroSet Board and bed in the tiles or slabs in accordance with the usual practice.
4. Finish with Arc Pro-Line Grout.

INSTALLATION ON FLOOR (ADHESIVE)

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ 6mm to 20mm boards are recommended for floors.

Tiling Guidelines

1. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.
2. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the substrate and bed in the boards ensuring full surface contact. Boards should be offset so that 4 corners never meet at the same point.
3. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for 100% waterproofing.
4. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the HydroSet Board and bed in the tiles or slabs in accordance with the usual practice.
5. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

INSTALLATION ON FLOOR (SCREWS & WASHERS)

- ✓ Ensure the substrate is structurally sound and free of dust and other contaminants.
- ✓ For a stronger fixing MS-11 Rapid High Tack can be applied on the substrate prior to fitting the boards on the floor.
- ✓ 6mm to 20mm boards are recommended for floors.

Tiling Guidelines

1. Using screws and washers, fix boards every 300mm. Fixings should be at least 1 inch from the edges. Boards should be offset so that 4 corners never meet at the same point.
2. Joints should be taped with Arc Scrim Tape or with Arc Butyl Tanking Tape for 100% waterproofing.
3. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the HydroSet Board and bed in the tiles or slabs in accordance with the usual practice.
4. Finish with Arc Flexi Grout or Arc Pro-Line Grout.

SHOWER BASES

INSTALLATION ON CONCRETE FLOOR

1. Lay the Shower Base down into the desired position and mark out the drain position on the concrete floor.
2. Dig out a hole big enough to fit the drain. This should be slightly larger than the mark made on the floor and should allow room for the drain's knuckle.
3. Make sure the drain lines up correctly and then connect the pipework to the drain using a PVC pipe adhesive. Place the black rubber ring onto the top of the drain. Ensure the floor is level in all directions.
4. Make sure the area is clear and dust free. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.
5. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the floor.
6. Bed in the shower base ensuring full surface contact. Check the shower base is level in all directions.
7. Screw the plastic ring through the shower base into the drain making sure the black rubber ring is in position. Attach all the drain components as shown across. Attach the riser only if the tiles to be applied are thicker than the height of the drain.
8. Using same thickness HydroSet Boards, cover the rest of the floor. See pages 56-57 for HydroSet Boards installation instructions.
9. Joints should be taped with Arc Butyl Tanking Tape. Tiling can begin directly onto the HydroSet Boards and the Shower Base.

**Note: Make sure the shower base and drain are fully supported underneath.*

INSTALLATION ON WOODEN FLOOR - RAISED

1. Timber must be dimensionally stable. Lay the Shower Base down into the desired position and mark out the drain position on the wooden floor.

2. Cut out a hole big enough to fit the drain. This should be slightly larger than the mark made on the floor and should allow room for the drain's knuckle.

3. Make sure the drain lines up correctly and then connect the pipework to the drain using a PVC pipe adhesive. Place the black rubber ring onto the top of the drain. Ensure the floor is level in all directions.

4. Make sure the area is clear and dust free. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.

5. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the floor.

6. Bed in the shower base ensuring full surface contact. Check the shower base is level in all directions.

7. Screw the plastic ring through the shower base into the drain making sure the black rubber ring is in position. Attach all the drain components as shown across. Attach the riser only if the tiles to be applied are thicker than the height of the drain.

8. Using same thickness HydroSet Boards, cover the rest of the floor. See pages 56-57 for HydroSet Boards installation instructions.

9. Joints should be taped with Arc Butyl Tanking Tape. Tiling can begin directly onto the HydroSet Boards and the Shower Base.

**Note: Make sure the shower base and drain are fully supported underneath.*

INSTALLATION ON WOODEN FLOOR - JOIST LEVEL

1. Timber must be dimensionally stable. Lay the Shower Base down into the desired position and mark out with a pencil around the edges of the shower base. Cut out marked area with an electric Jigsaw.

2. Lower supporting shelves between the joists (minimum of 18mm). Make sure that the support is flush with the joists and fully supporting. Place the support into position and check again that the floor is level in all directions.

3. Make sure the drain lines up correctly and then connect the pipework to the drain using a PVC pipe adhesive. Place the black rubber ring onto the top of the drain. Ensure the floor is level in all directions.

4. Make sure the area is clear and dust free. Prime the substrate with Arc Tilers Primer diluted three parts water to one part primer.

5. Apply a bed of Arc Rapid-Flex or High-Flex 55 Rapid Set Tile Adhesive to the floor.

6. Bed in the shower base ensuring full surface contact. Check the shower base is level in all directions.

7. Screw the plastic ring through the shower base into the drain making sure the black rubber ring is in position. Attach all the drain components as shown across. Attach the riser only if the tiles to be applied are thicker than the height of the drain.

8. Use Arc Butyl Tanking Tape around all the edges and over the corners. Tiling can begin directly onto the Shower Base.

**Note: Make sure the shower base and drain are fully supported underneath.*

SUBSTRATE PRIMING GUIDE

WHAT IS ARC TILERS PRIMER

Arc Tilers Primer is a high quality styrene butadiene co-polymer emulsion for use as a primer, bonding agent and sealer.

Arc Tilers Primer Plus provides a textured grit finish to difficult substrates such as existing tiles, prior to tiling.

Before tiling, the majority of wall and floor substrates will require priming.

Substrates are primed for the following reasons:

- To improve the adhesion of cement based products.
- Reduce the porosity of porous substrates.
- Arc Tilers Primer Plus improves the adhesion to non porous surfaces.
- Produce a barrier between calcium sulphate based surfaces and cement based adhesives to minimise the risk of chemical reaction.

Arc Tilers Primer is available in 1lt and 5lt.

Arc Tilers Primer Plus is available in 5kg.

For detailed guidelines on the complete substrate preparation see pages 46 to 59.

WALLS PRIMING

SUBSTRATE	PRIMING GUIDE
Plaster	First coat diluted 1 part primer to 3 parts water and allow to dry, followed by a neat coat
Plasterboards	Apply 1 coat diluted 1 part primer to 3 parts water
Sand / Cement Render	Apply 1 coat diluted 1 part primer to 3 parts water
Brick / Block	Apply 1 coat diluted 1 part primer to 3 parts water
Existing Tiles	Apply one coat of neat Arc Tilers Primer Plus
Plywood	Apply 1 coat diluted 1 part primer to 3 parts water

FLOORS PRIMING

SUBSTRATE	PRIMING GUIDE
Sand / Cement Screed	Apply 1 coat diluted 1 part primer to 3 parts water
Anhydrite Screed	First coat diluted 1 part primer to 3 parts water and allow to dry, followed by a neat coat
Concrete	Apply 1 coat diluted 1 part primer to 3 parts water
Plywood	Apply 1 coat diluted 1 part primer to 3 parts water
Existing Tiles	Apply one coat of neat Arc Tilers Primer Plus
Vinyl Tiles / Sheets	Apply one coat of neat Arc Tilers Primer Plus
Asphalt & Bitumen	Apply one coat of neat Arc Tilers Primer Plus
Fibreglass	Apply one coat of neat Arc Tilers Primer Plus
Green Screed	Apply 1 coat diluted 1 part primer to 3 parts water

EUROPEAN STANDARDS

EUROPEAN STANDARDS

All Arc Tile Adhesives and Grouts are manufactured in accordance with European Standards and meet or exceed the standards for each classification.

EN13888 is the general classification for cement based grouts Type C Class G.

EN12004 refers to the general classification for cement based adhesives categorised as Type C. Cement based adhesives with degrees of flexibility or deformable characteristics are categorised as Type C, Class S. Ready mixed or paste adhesives are categorised as dispersion adhesives Type D. Epoxy resin adhesives are categorised as reaction resin adhesives Type R.

GROUTS UNDER EN 13888

TYPE	CLASS	DESCRIPTION
CG	1	Cement based grout with normal characteristics
CG	2	Improved cement based grout with additional characteristics

ADHESIVES UNDER EN 12004

TYPE	CLASS	DESCRIPTION
C	S1	Deformable adhesive
C	S2	Highly deformable adhesive

ADHESIVES UNDER EN 12004 - CONTINUED

TYPE	CLASS	DESCRIPTION
C	1	Normal cement based adhesive
C	1F	Fast setting cement based adhesive
C	1T	Normal cement based adhesive with reduced slip
C	1E	Normal cement based adhesive with extended open time
C	1TE	Normal cement based adhesive with extended open time and reduced slip
C	1FT	Fast setting cement based adhesive with reduced slip
C	2	Improved cement based adhesive with additional characteristics
C	2E	Improved cement based adhesive with additional characteristics and extended open time
C	2F	Improved fast setting cement based adhesive with additional characteristics
C	2T	Improved cement based adhesive with additional characteristics and reduced slip
C	2TE	Improved cement based adhesive with additional characteristics, reduced slip and extended open time
C	2FT	Improved fast setting cement based adhesive with additional characteristics and reduced slip
D	1	Normal dispersion adhesive
D	1T	Normal dispersion adhesive with reduced slip
D	2	Improved dispersion adhesive with additional characteristics
D	2T	Improved dispersion adhesive with additional characteristics and reduced slip
D	2TE	Improved dispersion adhesive with additional characteristics, reduced slip and extended open time

EXPANSION JOINT GUIDE

STRUCTURAL VERSUS MOVEMENT JOINTS

Structural joints are physical gaps which divide a building into smaller sub sections accomodating differential movement between each sub section. Movement joints are small joints designed to absorb localised stresses.

CAUSES OF MOVEMENT

Structural:

- ✓ Structural settlement
- ✓ Structural deformation due to loading
- ✓ Drying shrinkage
- ✓ Ambient thermal gain and loss
- ✓ Wind loading
- ✓ Seismic events

Localised Movement:

- ✓ Drying shrinkage of localised adjacent substrates
- ✓ Small scale localised deformation such as creep
- ✓ Ambient thermal differentials
- ✓ Imposed thermal variations such as underfloor heating

MOVEMENT JOINT

Arc supply two types of movement joints:

- 1. Aluminium Expansion Joints** - These movement joint profiles are designed to accommodate localised stresses within tiled floors. The aluminium side section of the profile offers protection to the tile edge while the santoprene infill offers outstanding flexibility, tensile strength and chemical and weathering resistance. The anchoring angles are aluminium grade 6063 T6, which is heat treated to increase tensile strength.
- 2. PVC Expansion Joints** - This is a co-extruded PVC movement cotrol joint designed to appear as discretely as a grout line whilst absorbing localised compression and extension stresses. The PVC is resistant to most chemicals and detergents generally used in tiled applications. It has a detachable anchor which allows the joint to be used a a perimeter joint.

POSITIONING OF MOVEMENT JOINTS

The theory is to create "tile fields" large enough to absorb differential movement between the substrate and the tile covering. Movement joints should be installed in certain areas to prevent tiles or grout from cracking or to prevent the tiles from tenting and becoming debonded from the substrate.

The exact positioning of movement joints is vital to them successfully protecting the installation. Industry guidelines suggest that the maximum tile field should be no more than 10 meters in each direction. In practice, depending on the individual application, it tends to be between 5 and 8 metres.

WHEN TO USE EXPANSION/PERIMETER JOINTS

Based on BS 5385

(A) Any area greater than 2m x 1m where the tiling abuts walls requires perimeter joints as a minimum.

(B) For larger areas, the maximum distance between joints should not be greater than 8m in any direction.

Note: With large format tiles on heated screeds consider reducing this to 6m.

In addition movement joints should always be installed directly above

- (1) Changes in the substrate
- (2) Structural joints in the substrate
- (3) Gaps in the substrate

(A)

— Perimeter Joint (MLB)

(B)

— Perimeter Joint (MLB)

— Expansion Joint (MLB or MSA)

INSTALLATION

Ensure the correct depth of movement profile is selected according to tile depth. Using a suitable notched trowel spread the tile adhesive onto the substrate and firmly bed the profile, ensuring the adhesive penetrates the holes in the flange and covers the anchoring legs. Best practice is for the profile to be about 1mm lower than the tile.

A grout joint should be left between the tile and the profile.
